Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

3.3 DATA FLOW DIAGRAM AND USER STORIES

3.3.1 DATA FLOW DIAGRAM

The Data Flow Diagram represents how a user's request is processed by ServiceNow's ACL mechanism before access to the Institution Details table is granted.

LEVEL-0 DFD

DFD EXPLANATION

1. The user sends a request to access or operate on a student record.
2. ServiceNow receives the request.
3. The applicable ACL is identified according to the requested operation.
4. The user's required role is evaluated.
5. For the configured Read restriction, the Branch condition is evaluated.
6. If the required conditions are satisfied, access is allowed.
7. If the conditions are not satisfied, the requested operation is restricted.
8. Authorized operations are performed on the Institution Details table.

3.3.2 USER STORIES

User Story 1 – User Creation

As a ServiceNow administrator,
I want to create a test user named EEE User,
so that I can verify the configured access-control rules.

User Story 2 – Role Creation

As a ServiceNow administrator,
I want to create the roles bb1, bb2, bb3, and bb4,
so that different record operations can be controlled separately.

User Story 3 – Read Access

As an authorized user with the bb1 role,
I want to view the permitted EEE branch records,
so that I can access the records relevant to my authorization.

User Story 4 – Create Access

As a user with the bb2 role,
I want to create a new student record,
so that I can add records when creation permission is assigned to me.

User Story 5 – Write Access

As a user with the bb3 role,
I want to edit permitted student records,
so that I can modify records when write permission is assigned to me.

User Story 6 – Delete Access

As a user with the bb4 role,
I want to delete permitted student records,
so that I can remove records when delete permission is assigned to me.

User Story 7 – Security Verification

As a ServiceNow administrator,
I want to test different users and role combinations,
so that I can verify that unauthorized operations are restricted.
