

Project Design Phase-II

TECHNOLOGY STACK

Date	3rd October 2026
Team ID	6ab8c0aa8c7c66e70673078c
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

3.4 TECHNOLOGY STACK

The project uses the ServiceNow platform and its built-in security and scripting capabilities.

Technology / Component	Purpose in the Project
ServiceNow	Main platform used for implementing the project
Access Control Lists (ACLs)	Controls access to records and operations
Server-Side Scripting	Supports script-controlled access evaluation
ServiceNow User Administration	Creates and manages users
ServiceNow Roles	Defines access permissions
Custom ServiceNow Table	Stores Institution Details/student records
Reference Field	References ServiceNow users for Student Name and Faculty Name
Choice Field	Stores ECE, EEE, and CSE branch values
Auto Number	Automatically generates Student Roll Numbers
String Fields	Store Email and Phone Number
Multi String Field	Stores Description information
Web Browser	Used to access and configure the ServiceNow instance
Internet Connection	Required to access the ServiceNow cloud platform

TECHNOLOGY STACK ARCHITECTURE

TECHNOLOGY SELECTION RATIONALE

ServiceNow was selected because the project specifically focuses on implementing and understanding its Access Control List mechanism. The platform provides built-in capabilities for user management, roles, tables, ACLs, and server-side scripting, making it suitable for demonstrating role-based and field-based record access control.

This Requirement Analysis phase therefore establishes the exact user journey, functional requirements, data flow, user interactions, and technology components needed for the project before moving into the Project Design phase.
